

## Apex Bioenergetic Imprinter Instructions and Guidelines

The imprinter is primarily an amplifier. It amplifies bioenergetics signatures of persons, animals, homeopathic remedies, and some plants. Use it to boost a patient's resistance to disease.

### There are several methods of using the imprinter:

1. Two hand method. Place one hand on each plate, and press the start button. This method works very well, and is easy to do.

2. Detox Box method. Place homeopathic remedies on the input plate, and the black Detox Box on the output plate. Press the start button. The imprinter will copy the remedies, and imprint them into the Detox Box. Be sure to imprint the patient's bioenergetic signature into the Detox Box as well. Do this by placing one hand on the input plate, and the Detox Box on the output plate.

Once the Detox Box is loaded, place it on the input plate. Place the patient's hand on the output plate. This will stimulate the body to try and heal as directed by the homeopathic remedies.

Keep the users hands and the imprinter and Detox Box clean, see further instructions below.

Erasing the Detox Box. Place a pointed quartz crystal in one hand, and wave it toward a Detox Box in the other hand. Do this from a distance of about 3-4 inches. The Detox Box is erased within seconds.

3. Some users imprint remedies into a glass of clean water, then drink the water. I have not tested this, but it is commonly done. Water should probably be distilled water or use clean spring water.

### Care and Cleaning of the Bioenergetic Imprinter.

1. Handle the imprinter with washed hands if possible. If contacting food, bodily fluids, or animals, absolutely wash your hands before use.

2. The imprinter is best cleaned with rubbing alcohol. However excessive use will rub off the labels, and cause zinc to be removed from the brass plates. Green spots on the brass plates usually indicate excessive cleaning.
3. A quality zip lock bag works well to protect the imprinter. When used in this manner, only the plastic bag has to be cleaned. There is only a slight loss in efficiency when the imprinter is used with a plastic bag.
4. The two 9 volt batteries are easily changed. Usually they will last approximately 1,000 actuations. When the batteries start losing their voltage, the imprinter beep sound will change. Eventually the Low Battery Light will come on, but the imprinter will still work well for some time.

## Treating Patients

1. The imprinter is ideally used as home care, so the patient can actuate it several times per day. For new patients, I often recommend starting off with only one use per day. This is to avoid a Herxheimer reaction.
2. Many autoimmune diseases are caused by a cross reaction to a bacterial infection. The infection may only be located inside the gut tube and will not show up in a blood test. The PEAR group fall into this category.
  - Psoriatic Arthritis
  - Enteropathic Arthritis
  - Ankylosing Arthritis
  - Rheumatoid Arthritis

RA patients always test positive for a streptococcus infection. Blood testing may show no infection, so most likely the bacteria are proliferating in the gut. Weaken and starve the biomass of strep bacteria by eating no sugar and little carbohydrates. Input a strep remedy into the detox box. Use the imprinter 1x/day for the first week to avoid a Herxheimer reaction, then use the imprinter at least 3x/day. Always imprint the patient's bioenergetics signature into the detox box as well.

A low carbohydrate, no sugar diet is usually essential to treating patients with these conditions. However some patients react if there is gluten in their diet, but not to sugar or no gluten carbs. Multiple Sclerosis is also greatly affected by sugar and carbs in the patient's diet.

Generally a meat and vegetable diet is ideal. However some fruit and dairy is usually not a problem. Do not put fruit through a blender, as this makes the sugar in the fruit more bioavailable to the bacteria.

### **Muscle Testing**

Muscle testing with remedies helps to isolate the underlying cause of the disease. RA patients always test positive for streptococcus bacteria. Patients with alopecia areata test positive for parasites and mercury toxicity. Pelagic fish, such as tuna and swordfish often contains mercury, but the body does excrete it. Changing to a no seafood diet for a few months will usually cause mercury levels to drop dramatically.

Muscle test with the back side of the patients fingers against a suspected problem area. When the muscles of the body are weakened, have the patient hold various remedies until a particular remedy causes the muscles to strengthen.

Balance problems. These are common. Place the back side of the fingers against one ear, then the other. Note if the muscles become weaker. Then use the imprinter, and re-test. You will usually notice that the muscles now test negative (strong).

The easiest muscle test is with the patient standing, arms outstretched to the side at 90°, palms facing down. Push down at the wrist, note if the shoulder muscles are locked. Then place the backside of the fingers of the other hand against suspect areas, and check muscle strength. Repeat for different areas. Give the patient a chance to rest their arm.

A strong man is harder muscle test than a thin woman. You may only see a small difference between weak and strong, but this is enough. Alternative you can do muscle testing by extension, using a weaker person to contact the problem area.

### **Bioenergetic Imprinter strengths and weaknesses**

The imprinter works by boosting the body's overall health. The imprinter itself does not kill off bacteria. When an individual experiences a Herxheimer reaction, which indicates bacterial die off, the immune system has caused the die off. The imprinter only improves the effectiveness of the immune system.

The Apex Imprinter is extremely effective against bacterial infections. It is helpful with fungal infections, but mold is far harder to treat than simple bacteria. The imprinter helps with viral infections, but takes longer than dealing with bacterial issue. Some diseases, which appear to be caused by a viral infection, may take 3-5 weeks for symptoms to significantly lessen.
